

WATER MINERAL ANALYSIS

Client:	Sample Report	Lab Number	IWA10240x
Sample Source	Drinking water-Kitchen	Test Date	19. Apr. 10

Your drinking water has been tested for total recoverable metals in accordance with EPA Method 200.8 and §15 of the European Drinking Water Regulation. Accreditation: DIN EN ISO/IEC 17025.

The concentration of each element - other than Calcium and Magnesium, is reported in micrograms of element per liter of water (mcg/L). For Calcium and Magnesium, values are reported in milligram per liter (mg/L). All Test values are compared to maximum contaminant levels (MCL) as available and defined by EPA and the European Water Regulation offices.

Concentrations greater than the MCL are considered potentially harmful to health. A test value of zero (0.00) is a value below detection limit

	Test Value	MCL in mcg/L, unless noted otherwise
Aluminum	2.82	200.00
Antimony	0.12	5.00
Arsenic-total	0.13	10.00
